Portfolio

LeetCode

Education

Indian Institute of Information Technology Nagpur

Bachelor of Technology in Computer Science

Nov 2022 – May 2026

Nagpur, India

Technical Skills

Languages and frameworks: Go, Python, TypeScript, JavaScript, C/C++, Next.js, React, NestJS, Node.js, FastAPI

Databases: PostgreSQL, ClickHouse, Redis, DynamoDB

Message Brokers: Kafka, RabbitMQ

Infrastructure: AWS (Lambda, EC2, S3, Step Functions), Docker, gRPC, GraphQL, WebSockets

Observability: Datadog, Grafana, Prometheus, Langfuse

Developer Tools: Git, Postman, Linux

Experience

Mindtickle (Software Engineering Intern)

Dec 2025 – Present

Go, AWS (Lambda, Step Functions, S3, dynamoDb), gRPC, WebSockets, GitLab

- **Bulk Module/User Settings Update:** Built an async bulk module/User settings update feature implementing server-side filter/selection resolution and fan-out execution using AWS Step Functions and Lambda to handle up to 500K learners across 100+ modules in a single operation.
- Designed **multi-level batched pipelines** in Go with concurrency and idempotent retries across **10+ gRPC services**, integrated end-to-end **audit logging** and **real-time progress tracking**, reducing effort from hours to minutes.
- **Anti-Cheating System (HonorLock):** Owned end-to-end delivery of a service integrating **HonorLock webhooks + APIs**, relaying violation signals to the UI via **WebSockets** for real-time candidate warnings and automatic exam lockouts on detected cheating.
- Plugged the proctoring mechanism into the platform's existing assessment infrastructure with configurable enforcement per module and zero disruption to the current exam flow.

TrenchExchange (Backend Developer Intern)

May 2025 – Nov 2025

Go, Kafka, ClickHouse, PostgreSQL, Redis, AWS

- Built a fully automated event-driven trading pipeline in **Go** with 20+ configurable automation types including copy trading, limit orders, and TP/SL, processing **2,500+ events/sec** via a thread-safe in-memory cache that filtered irrelevant triggers before execution, achieving sub-second transaction confirmation and under **100ms** trigger identification.
- Built upstream **Go** services ingesting Solana blockchain transactions within **15ms** via gRPC; learned the Solana ecosystem from scratch and packaged multi-protocol transaction execution logic into a reusable library used across backend services.
- Migrated market analytics data from **PostgreSQL** to **ClickHouse** and built analytical views over the tables, reducing query response times by **70%** for real-time trading dashboards.

Heizen (SDE Intern)

Feb 2025 – May 2025

Python, FastAPI, NestJS, TypeScript, LangChain

- Built multi-agent GenAI pipelines for an internal developer assistant suite using custom **MCP servers** (FastAPI, NestJS) and automated lead generation via **LangChain**-based outreach workflows.

Projects

Verly [Live Link](#)

Oct 2025 – April 2026

Go, TypeScript, Next.js, React, PostgreSQL, Docker, AWS (Bedrock, EC2, RDS)

- Built a **production** AI customer support platform serving businesses across web chat, WhatsApp, and voice with agent deployment, knowledge base ingestion, and human escalation in one workflow.
- Engineered a **graph-based RAG pipeline** in Go for knowledge ingestion and response generation, supporting custom tool integrations per business.
- Implemented **identity verification** and custom **MCP server** integrations, enabling businesses to serve each customer in a personalized, context-aware way.
- Built an **analytics** layer capturing conversation metrics, failure modes, and CSAT signals to enable continuous agent improvement.
- Engineered a **continuous chatbot evaluation platform** leveraging LLM-as-a-Judge techniques to simulate real-world user interactions, benchmark agent performance, detect regressions, and validate chatbot behavior before deployment.

Realtime Collaborative Workspace [Live Link](#)

Aug 2024 – Oct 2024

Next.js, WebSockets, Redis, Kafka

- Built a **real-time collaborative** document workspace with live cursors and chat using WebSockets + **Redis Pub/Sub** + event-driven **Kafka** pipeline for high-throughput, multi-instance performance.

Achievements

- **CodeChef 4 Star Rated**(1875 max) and **Leetcode Knight**(1991 contest rating) in competitive programming.
- Secured **Rank 327/32,166** in LeetCode Weekly Contest 399 and **Rank 495/30,286** in Biweekly Contest 131 by efficiently solving 3 out of 4 algorithmic problems, showcasing strong data structures and algorithms proficiency.
